

Everyone immediately informed with one push of a button

Multichannel platform Netpresenter speeds up communication, reduces costs and brings external and internal communications closer together

PCs, smartphones, TV screens, social media and internet – use all these media to reach your employees, customers, visitors and inhabitants with one push of a button. With this software solution you can inform everyone on a day to day basis, and alert all in case of an emergency. Making it simple to end e-mail stress and information overload in an affordable, effective fashion, while at the same time increasing traffic to your intranet or website and have a true 'media bomb' at your command when necessary.

One button for PC, TV, mobile, internet and social media

Netpresenter helps you reach everyone – passers-by, customers and/ or staff - by broadcasting your (internal) news on all available screens - PCs, TVs, digital signs, kiosks, mobile device screens – and using social media (Facebook, Twitter), SMS text messages and e-mail. All with one integrated solution. Saving costs, as Netpresenter's integrated solutions leverage existing infrastructure and hardware. And saving time. From your IT team, as the software is very easy to roll out and manage. Just imagine having to manage just one system, instead of ten different ones. And also from your communication team as news is added within a few mouse clicks. Or no clicks at all if you choose to automatically add in news from internet, intranet, Sharepoint, Excel, databases, CMS and even webcams.

An 'AMBER Alert' within your organization, city or municipality

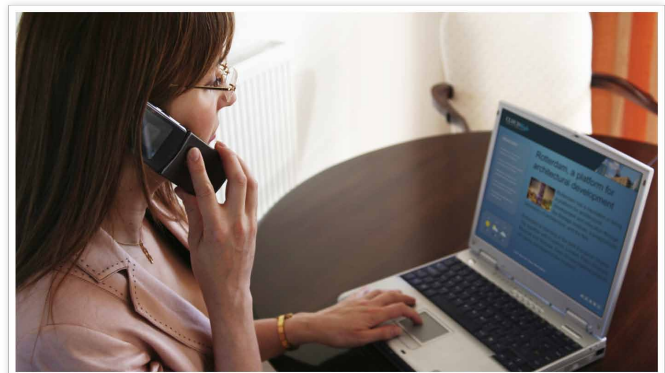

With the Dutch AMBER Alert system, powered by Netpresenter software, the picture of an abducted child is immediately brought to the attention of millions of Dutch citizens – using TV, highway signs, website banners and pop ups, email, SMS text messages (with picture), Digital Signage screens, PC screensavers, Twitter, Hyves (Dutch equivalent of Facebook), Facebook and PC pop ups. Turning the whole country in one large 'missing' notice within ten minutes.

Netpresenter software allows you to instantly publish a highly visible, visual alert on ANY screen – whether it is a PC, TV, smartphone, bank terminal screen or highway sign – but also publish alert messages on websites and social media such as Facebook and Twitter and send out SMS text messages (incl. mobile websites) and e-mails.

A proven, 3-mouse click solution to alert all in case of a escaped felon (crime alert), terrorist threat (terror alert), child abduction (AMBER Alert) or other type of calamity (emergency alert). Netpresenter software is already used in major hospitals, schools, universities, chemical plants and even drilling platforms.

One million screens worldwide

Netpresenter software has been around since 1995 and nowadays runs on more than 1 million screens worldwide; more than all competitors put together. Customers include multinationals such as Sony, Nokia, DSM, Miele, Canon, Total, Philips, Unilever, QPark, Akzo Nobel, TNT, Ford, GE, Ahold, L'Oreal, Rabobank, Jaguar, Adecco, Volkswagen, Stork, Barclays, but also many police organizations, governments, airports, hospitals and schools. Apart from that, Netpresenter also has a lot of smaller and medium sized customers. Netpresenter offers software that is installed locally (purchase or rent) as well as solutions that are hosted via the internet.

Discrete repetition of the message on the screensaver ensures the message is remembered better

Complete control over your communication

The output possibilities of Netpresenter software

Digital Signage (TV-screens)

Create flashy, dynamic Digital Signage presentations within a few mouse clicks, to be published on large screens in for example stores.

PC-screensaver

Publish your news on all PCs as a screensaver. Highly effective, as gentle repetition of the message ensures it is remembered better, and without interrupting staff at work.

PC pop up

When a message is urgent or when there is a calamity, it is also possible to have a pop up message appear on all PCs (or a group of PCs). This pop up message is not stopped by pop up blockers.

E-mail

Sometimes a message is of such importance that you would like to inform all via e-mail too. Publishing a new (alert) message to all employees (or a specific group) including push email.

SMS text messages

When you would like to update everyone on news or alert all in case of a calamity, you can send everyone a SMS text message with one push of a button.

Mobile website

Automatically publish your news on a mobile website. Making your news more easily accessible for mobile users.

Twitter

The latest Netpresenter software allows you to also publish your news on your Twitter account with the same push of a button, whether it is an internal message or a message that can be read by all.

Facebook

With all Netpresenter software you can automatically publish all news on your corporate or personal Facebook account. Facebook is the largest social network in the world.

RSS newsfeed

When you publish a news item, you can now easily generate an RSS newsfeed. With this feed you can display your news in other applications.

Hyves, MSN, Yammer

Netpresenter can also be linked to iGoogle, Hyves, Instant Messenger, Yammer, intranet and highway signs. A tickertape is available for RSS newsfeeds.
